Dear readers,

The rather turbulent global developments with multiple crises world-wide calling for fundamental transformations in virtually every segment of society have become something like a “new normality”, a demanding one, admittedly. In the light of the grand challenges we are facing, it is encouraging to see continuity, progress and confidence in the close University environment.

We as a faculty, and in particular the Department of Geography and Regional Research, were intensively involved in preparing and designing a big infrastructure project, the “Campus Althangründe”, which will provide infrastructure accounting for a “modern understanding” of collaborative research and teaching and which will bring together physically the working groups presently located at NIG with other parts of the Faculty in the 2030ies.

Moreover, in 2023 we were heavily engaged in the faculty evaluation, which started in autumn 2022 and is still ongoing. In the course of this process we developed a high level of collaborative interaction among the different departments rendering our diversity a great opportunity rather than a weakness. This strengthens the faculty on a whole and have positive impact on our future development.

Finally, I want to mention the successful installation of a new professor for Spatial Research and Spatial Planning, a position that had been vacant for years. It is the rational analysis and collaborative spirit at the department, which finally made this possible and which is the basis for further positive development on a very promising path that has emerged over the years.

Rainer ABART

Dean

A handwritten signature in blue ink, appearing to read "Rainer Abart". The signature is stylized and cursive.

Rainer Abart

Dear readers,

As we reflect on the past year, the journey of the Department of Geography and Regional Research has been marked by significant achievements, strategic growth, and a deepened dedication to addressing the pressing grand societal challenges facing our planet.

In 2023, many new colleagues joined the department, each bringing new perspectives and expertise to our diverse academic community. The appointment of Meike Levin-Keitel as Professor of Spatial Research and Planning also marked the end of a phase of significant personnel changes at the professorial level. We now have a solid and consolidated foundation on which to build and develop our department, in the firm belief that our academic institutions play a vital role in driving positive change in society.

Also, in the area of teaching, there are encouraging developments. Our field was one among only a few that succeeded in increasing the number of students completing their studies to meet the goal set by the university. Our student numbers are, all in all, stable despite the growing overall trend of declining student numbers. Our master's program on "Geography of Global Change and Sustainability" has been received very positively, with growing numbers of students.

Last year, many of us, contributed to the faculty evaluation process. This entire process was driven by a collaborative spirit and a commitment to strengthening and improving our faculty. As a department, we highlighted areas where we see potential for progress. We presented ourselves excellently, and the entire process also reassured us of our direction and purpose.

In 2023, we were also preoccupied with the prospect of an imminent move from the NIG - which has been our academic home for decades - to the new "Campus Althangründe", which is due to be realised in the 2030s. We have demonstrated our ability to coordinate and articulate our needs for a modern departmental infrastructure and are therefore confident that the relocation will be beneficial for the development of the department as a whole.

Looking ahead, we are excited about the opportunities and challenges that the future holds. We would like to close by thanking our scientific staff members that forms the foundation for continued excellence in the coming years. We also wish to thank our administrative staff, external lecturers, and guest researchers who have essentially contributed to the accomplishments achieved throughout the past year.

We hope you enjoy reading about our accomplishments and join us in celebrating the remarkable work of our department.

**Patrick
SAKDAPOLRAK**

Department of Geography and Regional Research

What makes us different!

Founded in 1885 the Department of Geography and Regional Research (IfGR) is the oldest and largest geography department in Austria. It is home to more than 100 researchers in 9 working groups and 3,500 students. Since its foundation, it has not only grown dynamically but also continuously broadened its focus. From the beginning, it has accommodated both human and physical geography. This interdisciplinary basis in social and natural sciences provides a dynamic and inspiring environment for researchers to address the grand societal challenges of our time.

Sustainability Strategy of the Department for Geography and Regional Research

The University of Vienna aims to contribute with its wide range of disciplines and expertise in different fields to the grand societal challenges in the areas of research, teaching and studies. Societal challenges such as climate change, the biodiversity crisis and increasing socio-economic disparities are also an important concern for the Department of Geography and Regional Research. The Department is aware of its social responsibility to address these challenges and at the same time to point out possible solutions, and therefore aims to position itself with its own sustainability strategy. This considers Geography as an important bridging discipline between natural and social sciences.

Four Working Groups on Operations, Research, Teaching and Outreach have been formed, in which representatives of the professorial staff, post-doctoral students, doctoral students, the general university staff as well as students, jointly drive forward the development of the department's sustainability strategy.

The Operations Working Group addresses the issues of planning and projects. The Research Working Group has defined three areas of activity on which to focus: Research on sustainability, Sustainability of the department's research processes and Research output. Three key fields were developed for the area of Teaching: 1. Integration of transformative education in the context of sustainability, 2. Consideration of the different dimensions of sustainability in curricula and courses, and 3. Resource- and energy-saving planning and implementation of courses. The Outreach Working Group conceptualizes and implements approaches for a more visible science communication in relation to the Department's sustainability activities.

It is now time to define clear goals for our sustainability strategy, short-term, medium-term and long-term ones, and to work on communication channels. Different workshops will be organised in order to develop jointly with all members of the department, including our students, concrete activities for the future.

We are convinced that our societally relevant research and our teaching topics and methods contribute towards more sustainable societies.

Digital Geography

The working group on Digital Geography explores the new means of Geographical Research in the Digital World.

Our works involves testing existing geographical theories and methods with new types of geodata. Also, we investigate new forms of analysis and modelling such as extending or adapting methods & workflows to become more spatially-aware. Furthermore, we are interested in the new technologies that generate process, store, analyse and share data (smart-phones, LBS, LBSN, mobile technical sensors, mobile apps, semi-volunteered online registrations/submissions) with the scope of evaluating and improving the geographical information that is being produced. .

Research Focus

- **Spatial Conscious Machine Learning** || Spatial Heterogeneity & Dependence Features in ML workflows
- **Spatial Crime Analysis** || Law of Crime Concentration, Crime Forecasting, Perception Gap, Ambient Population
- **Location Privacy & Protection Methods** || Semantic Attacks & User Profiling from Location Data

Teaching

We offer courses for the programs of Master Cartography and Geoinformation, Master Regional Research and Regional Planning, Master Geography, Master Teacher Training Programme: Geography and Economics. Our courses are quantitative and methodological and cover the subjects of: a) **spatial statistics**, b) **descriptive analytics**, c) **predictive analytics**, and d) **location privacy**.

Selected Project

Mapping and Modelling the Crime Perception Gap (June 2023 – May 2026)

This project intends to quantify the “gap” and also provide levels of accuracy in space. It involves the examination of the spatial covariates to crime risk perception, the development of a Sketch Mapping UI and a GVA UI. Funding: FWF - Austrian Science Fund / NKFIH – National Research, Development, and Innovation Office, Hungary.

Geoecology

The Geoecology Group aims at understanding ecosystem functioning across scales and time. More specifically, our research aims at identifying physical, chemical and biological parameters that control ecosystem carbon turnover on the landscape scale. We pay particular attention to vegetation and soils, as they are proxies for present and past ecosystem conditions. To achieve this, our research employs methods from soil science, ecophysiology and micrometeorology in a geography context. At present most of our projects focus on peatland carbon cycling at various field sites in Austria, the Netherlands, Germany, Poland and Sweden.

Research

At present most of our projects focus on **peatland carbon cycling** at various field sites in Austria, the Netherlands, Germany, Poland and Sweden.

Teaching

Our undergraduate teaching provides the students with basic knowledge and skills required to understand and contribute to modern Geoecology. The interdisciplinary nature of Geoecology is reflected in our graduate teaching: It delivers extended knowledge on Wetlands, Terrestrial Ecosystem Ecology, Climatology and Soil Science to students of Geography, Environmental Sciences, Geosciences and Biology. Advanced field and laboratory projects are held in close contact with our research projects.

Human Geography | Economic Geography

Our research addresses multiscale processes of innovation-based structural change and transformation in the wake of grand societal challenges. In particular, we focus on the spatial configuration of innovation processes, regional industrial transitions, new regional development paths and sustainability transitions, disparities in regional development, and challenge-oriented innovation policies. Our research activities are theory-led, evidence-based, and inform policy. We offer scientific expertise on the geography of innovation and regional sustainability transitions.

Research Priorities

- Innovation and exnovation dynamics in regional industrial transitions | processes of green and inclusive path development and their spatial consequences | geography of sustainability transitions and transformations | challenge-oriented regional innovation systems
- New approaches to regional, innovation & industrial policies | challenge-oriented innovation policies in multilevel governance arrangements
- Unequal regional development | transition processes in disadvantaged and vulnerable regions | regional economic resilience
- Multiscale flows of information and knowledge construction | global value chains and global (re)production networks | resource-making and research & development

Teaching

Our teaching covers economic geography, sustainability transitions and transformations, and empirical methods. Through research-led teaching, we offer courses on the geography of innovation and sustainability transitions, regional development, and innovation policy. The working group is responsible for the master degree specialisation on “Socio-Economic Transformation”.

Physical Geography ENGAGE – Geomorphological Systems and Risk Research

The research group ENGAGE (Geomorphological Systems and Risk Research) led by Prof. Glade has its core research competences in the fields of geomorphological processes and environmental changes, and the hazards and risks resulting thereof. Methodically, the group includes a high level of expertise in the fields of monitoring and field measurements, sampling, remote sensing, modelling, and laboratory analysis, but also strongly contributes to the scientific discourse at a theoretical level.

Current studies focus on monitoring and modelling of different types of landslide processes as well as fluvial erosion, research on extreme events, connectivity research, arid geomorphology, quaternary research, arid geomorphology, analysis of the effects of Global Change within a multi-hazard risk perspective, vulnerability, resilience and risk research, and research on human-environment interactions. The highly dynamic group currently includes 2 postdoc, 1 senior lecturer, 1 senior scientist, 10 PhD students, 4 student assistants, and 2 non-scientific staff member as well as many visiting PhD students and guest professors. A large pool of field equipment (including UAVs, terrestrial laser scanners, drilling equipment) is available and frequently used in education and research.

Educating

The possibilities to specialize in the fields of Physical Geography with foci on Geomorphology, Hazards and Risks are manifold. Teaching is tightly coupled to our research at all levels in order to allow students to profit from the available expertise, and to bring them in touch with “real-life” questions, enhancing their chances in various segments of the job market.

Population Geography and Demography

The TransForm Research Group conducts ground-breaking research on the nexus of migration and global change. It seeks to advance academic knowledge and debates on the (im-)mobility of populations in the context of environmental change and social transformation processes, and to conduct research with societal relevance. We aim to generate theoretical knowledge and empirical findings that further our understanding of the impact of global change processes on migration and the potential of migration and translocal connectedness for social and ecological resilience.

Research Focus

We conduct research in the following key areas:

- Drivers / Impact of migration in the context of global change
- Vulnerability and resilience of coupled and connected livelihoods and social-ecological systems
- Mixed method, meso-level approaches that combine the explanatory power of case study research with the ability to generalize and to draw conclusions on higher level

Teaching

Our teaching focuses on the interface of “Population, Environment, and Development” and seeks to enable students to understand and analyse complex socio-ecological phenomena by using geographical concepts and methods, to reflect and to search for innovative solutions. We place a high priority on the close interlinking of research and teaching.

Highlight 2023 – ECMN

We have led the establishment of the Environment and Climate Mobilities Network (ECMN) – a transdisciplinary network of scholars and practitioners interested in environmental and climate change and various forms of human mobility – and organized the launch conference in Vienna in July 2023.

For more details, see: <https://www.climate-mobilities.network/>

Spatial Data Science and Geocommunication

Our international research group works on a wide range of theoretical and applied topics in geocommunication and spatial data science, ranging from cartography and hyper-globes to GeoAI. Most of our work is concerned with the representation, management, analysis, and visualization of geographic and spatial data. Our mission is to design systems that better understand the information needs of an increasingly diverse user base. We are committed to FAIR data principles.

Research Focus

Our research focuses on three major aspects of geocommunication and spatial data science. In geocommunication, one focus lies on thematic cartography including data portals for disaster management such as the Avalanche Warning Service Information System (LAWIS), while another focus lies in geovisualization including 3D displays (hyper-globes). Finally, for spatial data science we are interested in knowledge graphs, FAIR-based geo-data management, and GeoAI (artificial intelligence) techniques for information retrieval and integration. We collaborate extensively with international partners and frequently welcome international visitors.

Teaching

We teach courses on fundamentals of GIS and cartography for the department's bachelor programs and run the master program in cartography and geo-information science consisting of classes about spatial data science, geovisualization, geocommunication, and so on. Our teaching integrates both state-of-the-art research and industry applications into bachelor, master, and doctoral programs.

Hyper-Globe Research

The hyper-globe research group, under the leadership of Andreas Riedl, works on geo-stories for the hyper-globe device. Numerous stories have been produced and are regularly demonstrated to groups of visitors, mainly from schools and other educational institutions.

GeoAI Research

We are heavily involved in the KnowWhereGraph, a 16-billion statement, geo-enabled knowledge graph of over 30 pre-integrated data layers at the interface between humans and the environment. KnowWhereGraph pilots include applications in disaster relief and simulation, food supply chains, and environmental intelligence applications. Our research focuses on novel GeoAI and machine-learning methods to discover new links within the graph, provide area briefings for any region on earth, and on developing human and machine-readable semantic descriptions of the data to implement FAIR principles.

Further information: carto.univie.ac.at

Spatial Research and Spatial Planning

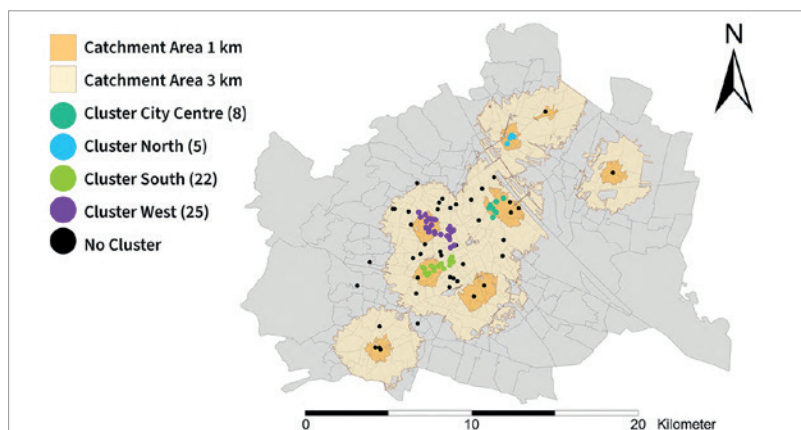

In our working group, we share the interest in how societal activities re-shape spaces, combined with social, economic, as well as ecological concerns. From there stem the synergetic ambition of advancing theory, producing analytical results and, ultimately, assessing and inspiring policy and planning practice. We employ and combine various quantitative and mostly qualitative research methods of empirical social research. We engage with the local and national planning community as well as we actively contribute to international scientific networks like ARL, AESOP, ERSA and the Regional Studies Association.

Research Focus

Taking a governance perspective, we focus on institutions and actors of policy and planning, civil society and economy – their challenges, conflicts and cooperation in urban and regional development, around e.g., housing, mobility and public services. We analyse urban neighbourhoods, cities and (polycentric) city networks, functional urban regions, cross-border areas, rural areas, centre-periphery relations and their dynamic over time. Thereby, we frequently employ comparative research designs between places, regions and scales – from local to European and Transatlantic.

Teaching

Our working group teaches courses and supervises theses in all curricula of Geography. A special focus lies on teaching in the master's programme of Spatial Research and Spatial Planning (Raumforschung und Raumordnung). We are also active in the Erasmus Mundus study programme of Urban Studies (4CITIES). In supervising master theses, topics range specifically from local and regional planning via national sectoral planning to EU Regional Policy matters and vastly follow an applied empirical approach; aiming at normative conclusions for planning practice.

Urban Studies

The Urban Studies Working Group explores the intersection of social, ecological, and technical processes in cities to craft integrated solutions and contribute to more sustainable, resilient, and equitable urban developments. More specifically, the group analyses how global change processes manifest in urban areas, drive change, and compel cities to adapt and accelerate sustainability transformations.

Key focus areas include:

- Urban Sustainability Transformations
- Socio-spatial disparities, participation and social innovation
- Circular Cities and urban food system resilience
- Urban vulnerability and transformative capacities

Research Focus

Through the development and application of an Urban Sustainability Living Lab (USLL), the Working Group strives to formulate urban strategies which combine emerging digital technologies with social innovation processes, nature-based solutions, and more inclusive multi-level governance approaches. This process is driven by transdisciplinary research and engaging methods which include actors from different research disciplines, administration, the private sector, urban practice, and civil society, in order to facilitate mutual learning, the co-creation and co-production of knowledge, including collaborative experimentation.

Teaching

The Group's main objective is to support students in identifying, analysing, and evaluating complex social-ecological-technical urban (sub)systems and their interactions from a critical sustainability perspective. The applied approach bridges theory and practice by enhancing students' technical, method, and transdisciplinary skills.

Teaching

Facts & Figures

From 2022 to 2023 in both Teacher Training Programs – Bachelor and Master – the beginners decreased significantly. In the number of Bachelor beginners there was nearly no change, while a significant increase can be reported for the Master’s program. It’s also very interesting that most of the Students in this Master program join from other countries. This Master program also has the relatively strongest increase in students. The rest of our Master programs also have a slight decrease in the number of beginners.

Students' Representatives

2023 has been a very eventful and joyful year for us. Besides of all our duties and events planned for our fellow students, new mandates were elected due to the ÖH elections this May. And even though those new elected people already were part of our diverse group, we still saw some new faces joining us too, helping us to organize different events and welcoming our fellow students in our cozy StV-Kammerl!

Organization

Every two to three weeks, we are holding a meeting in the conference room in the NIG to discuss study-related concerns, find solutions to problems, and plan and organize various activities and events for the students. Besides those meeting, we also went to a strategy meeting to Hungary in the end of March, where we spent several days planning the next two semesters and gather different new ideas for events and so on.

Advising

We offer student advising sessions almost every day of the week, where we try to solve all the problems and concerns of the students via phone, email or in person. In addition to that, everyone is also welcomed to stop by our StV-Kammerl during those sessions for a nice chat or for a drink of coffee and mate!

Events

2023 saw a lot of events organized by us: from sporting activities such as a bike tour and a very rainy Geo-Olympics, over various spritzer stands to evening events and big parties like our monthly "Geo-Stammtisch" at Café Kreuzberg and our Geo- and MEGA-Festivals at The Loft. But our biggest highlights were the events organized especially for all new geography students in October, like the "Ersti-Week", where we planned several small events for our freshmen, and our yearly "Ersti-Seminar", where we spent a weekend with many newbies at the BOKU-Lehrforst in Forchtenstein and organized various workshops, activities, and games to offer our new faces a great start into university life!
